

# Perinatal Health Strategic Plan Town Halls

## Data Resource: Perinatal Care Region 2 Northwestern

The Perinatal Care Regions (PCRs) were created through the establishment of the NC Perinatal Health Care Program in 1974 after the NC General Assembly ratified the Perinatal Health Care Bill in 1973. The original design criteria were that each region would have: 1) a Level III hospital; 2) contain 300,000 to 1 million people; 3) counties within a 2-hour travel time to the regional centers; and 4) at least one Area Health Education Center. While the work done through the NC Perinatal Health Care Program has transformed into other programs and initiatives over the years due to legislative changes and funding opportunities, the PCRs have remained. There are currently six regions that cover all 100 counties. The number of counties in each region varies, with the smallest region comprising eight counties and the largest twenty-nine. The NC State Center for Health Statistics (SCHS) provides vital statistics data for each of these regions in many of their annual reports and publications and per ad hoc requests. The Maternal Health Innovation Program's State Provider Support Network is organized by these PCRs.

### Data Considerations

To highlight inequities in health outcomes due to interpersonal, institutional, and systemic racism, every effort has been made to provide data for racial and ethnic population groups for each of the indicators. Racial/ethnic categories are defined by the data source and are not consistent across the indicators. Non-Hispanic is abbreviated NH in all charts and tables.

# Overarching Indicators

1) Eliminate the Black/white disparity in infant mortality (# of infant deaths for every 1,000 live births)

## Resident Black and White Infant Mortality Rates & Black/White Disparity Ratios, NC and Perinatal Care Regions 2017-2021

- Non-Hispanic (NH) Black Infant Deaths per 1000 Births
- NH White Infant Deaths per 1000 Births
- Black/White Disparity Ratio

The Black/white Disparity Ratio is the Black Infant Mortality Rate (IMR) divided by the white IMR. In NC for the 2017-2021 time period, Black babies were 2.6 times more likely to die than white babies.

### Perinatal Care Region 2 Northwestern Infant Death Rates (per 1,000 live births), 2017-2021

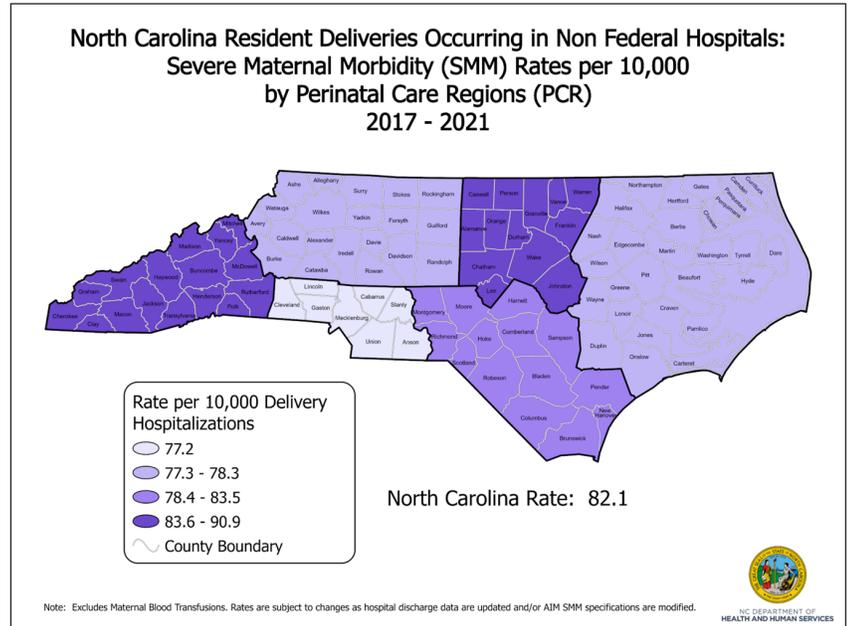

County	NH Black Infant Deaths	NH Black Births	NH Black IMR	NH White Infant Deaths	NH White Births	NH White IMR	Total Infant Deaths	Total Births	Total IMR	Black:white Disparity Ratio

Yadkin	0	44	0.0	13	1389	9.4	16	1836	8.7	0.0

\*Technical Note: Rates based on small numbers (fewer than 10 deaths) are unstable & should be interpreted with caution.

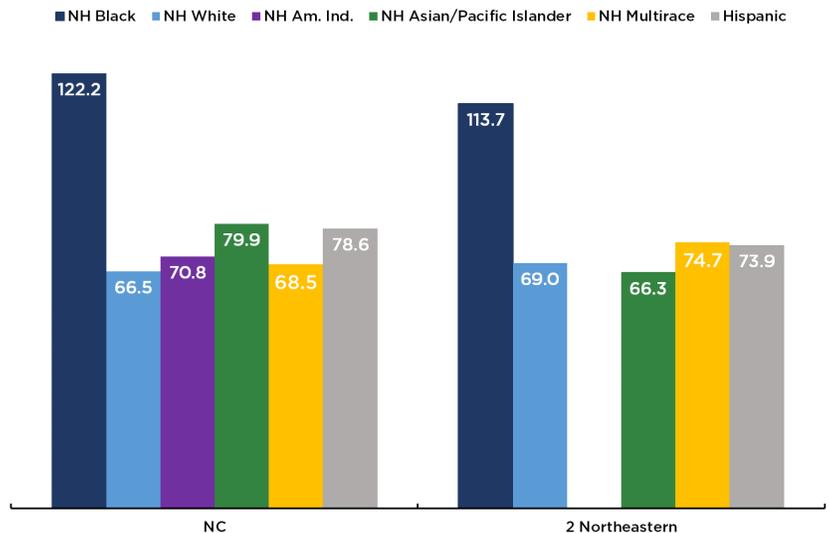

# Overarching Indicators

## 2) Eliminate the Black/white disparity in severe maternal morbidity (SMM), excluding transfusions

Severe maternal morbidities (SMM) are unexpected outcomes of labor and delivery that result in significant short- or long-term consequences to birthing individual's health. The source of these data are the NC Inpatient Hospital Discharge data files (excludes discharges from federal facilities and out-of-state hospitals). Cases in which blood transfusion was the only indicator of SMM are typically excluded, given that the number of units transfused is unknown in these data, and blood transfusion alone may not represent a "truly severe" event.

**Severe Maternal Morbidity Rates per 10,000 Delivery Hospitalizations by Race/Ethnicity, NC and Perinatal Care Region 2, 2017-2021**  
(Rates based on fewer than 10 cases are unreliable and are redacted from this chart.)

**PCR 2 Northwestern Severe Maternal Morbidity Rates, 2017-2021**

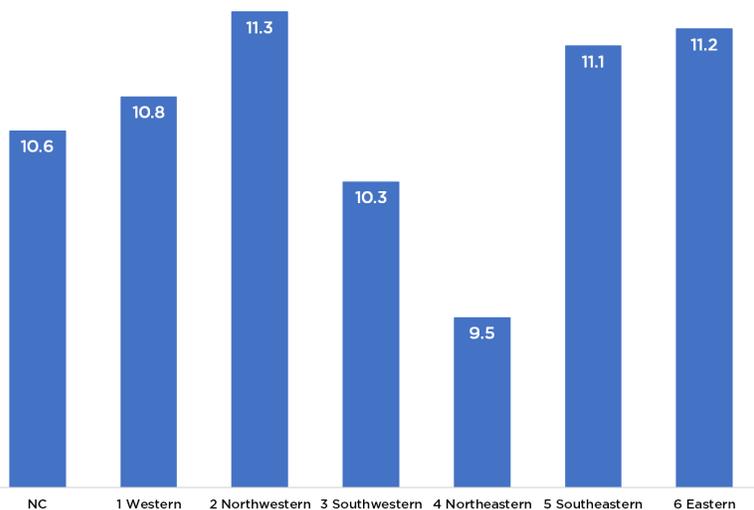

County of Residence:	SMM (excluding transfusions)	Total Deliveries	SMM Rate per 10,000 Deliveries	County of Residence:	SMM (excluding transfusions)	Total Deliveries	SMM Rate per 10,000 Deliveries
Alexander	11	1,682	65.4	Guilford	283	29,783	95.0
Alleghany	2	407	*	Iredell	62	9,174	67.6

# Overarching Indicators

## 4) Increase health insurance rates to 90% or above for all racial/ethnic groups

Percent of People Age 19-64 in NC with Health Insurance by Race/Ethnicity, 2021

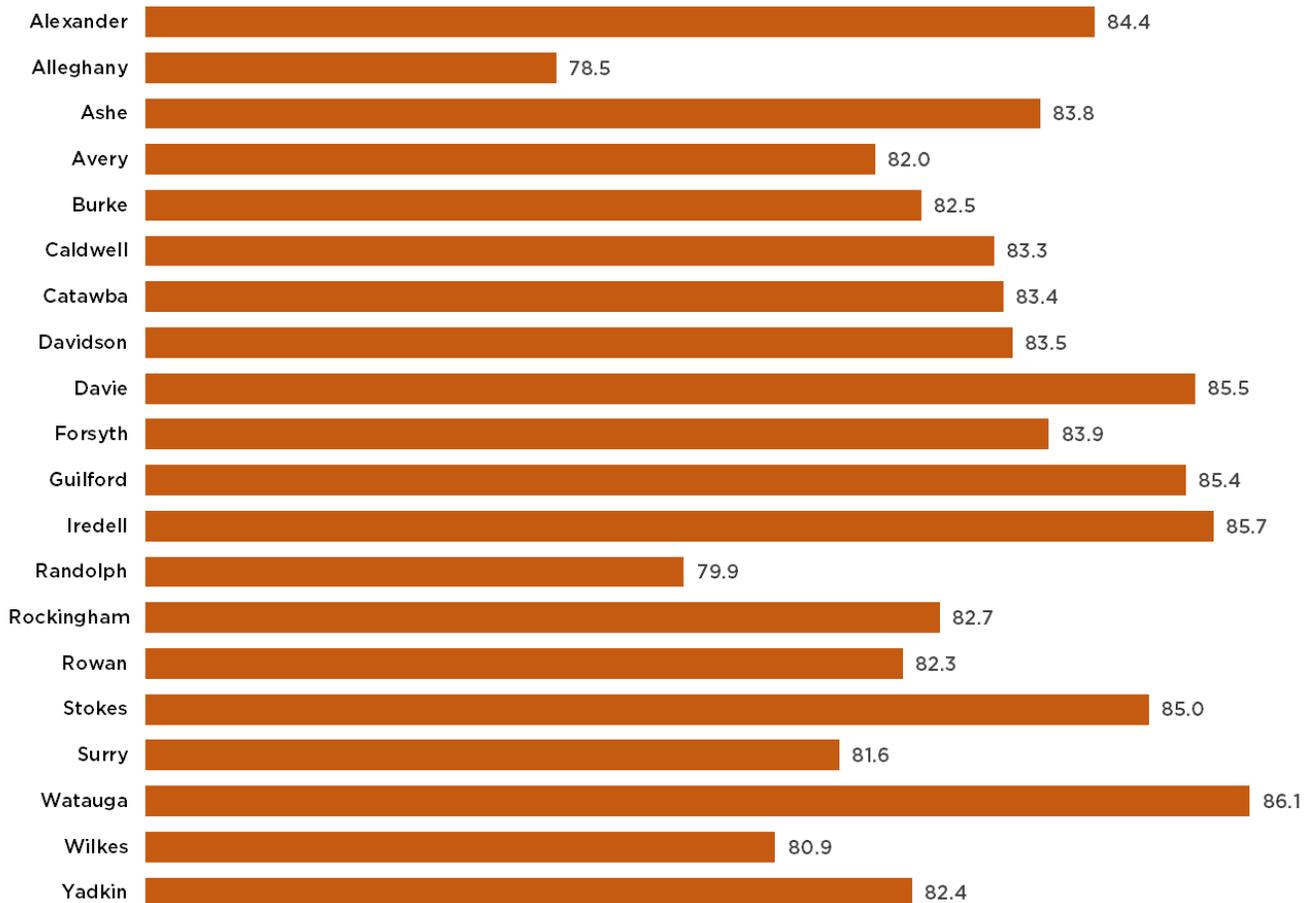

Small Area Health Insurance Estimates (SAHIE) uses the American Community Survey (ACS) definition of insured: Is this person CURRENTLY covered by any of the following types of health insurance or health coverage plans?

- Insurance through a current or former employer or union (of this person or another family member)
- Insurance purchased directly from an insurance company (by this person or another family member)
- Medicare, for people 65 and older, or people with certain disabilities (Note: SAHIE does not report insurance rates for people over 65 since over 98% of people over the age of 65 are insured)
- Medicaid, Medical Assistance, or any kind of government-assistance plan for those with low income or a disability
- TRICARE or other military health care
- Indian Health Services\*
- Any other type of health insurance or health coverage plan (user specified)

\*People whose only health coverage is Indian Health Service are uninsured as IHS is not considered comprehensive coverage.

Percent of People Age 19-64 with Health Insurance Perinatal Care Region 2 Northwestern, 2021
