NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

2

"Normal" Psychological Changes in Pregnancy

- **First Trimester:** Mild anxiety (ambivalence, worry), changes in energy, appetite, libido
- **Third Trimester:** increased anxiety about labor and delivery, impending role change
- Mild forgetfulness, confusion, distractibility
- Worry: health of baby, responsibilities, finances etc.
- Heightened awareness of prior relationships, losses, esp. family of origin

IMAGE SOURCE: OpenStax CNX

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

3

Hormonal Changes in Pregnancy

Internal environment

- Hormonal fluctuations**
 - Estrogen + Progesterone - rise dramatically in 3rd trimester, fall even more dramatically at parturition
 - Oxytocin – rises during labor - role in attachment, lactation
 - Hyperactive HPA Axis with high plasma cortisol
- Brain Circuitry Changes**
 - Increased neuronal activity - increased vigilance and protectivity
 - More sensitive reward and motivation circuitry - increased sensitivity to infant cues

External environment

- Body
- Mind
- Relationships
- Work
- Sleep

IMAGE SOURCE: OpenStax CNX

4

Perinatal Mood and Anxiety Disorders (PMADs)

Perinatal Mood & Anxiety Disorders

Depression in pregnancy

Post-Traumatic Stress Disorder

Anxiety

Postpartum depression

Bipolar disorder

Obsessive compulsive disorder

Insomnia

Psychosis

IMAGE SOURCE: NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

5

Prevalence of PMADs

PMADS are the #1 complication of pregnancy and childbirth but they remain unrecognized

Up to 1 in 5 women develop mental health problems during pregnancy or in the first year after childbirth.

IMAGE SOURCE: created by author

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

6

The Baby Blues

- **A normal emotional experience**
 - Effects 50-80% of postpartum individuals
- **Symptoms include:**
 - Tearful, anxious, moodiness, trouble sleeping
- **80% resolve by third week postpartum**
- **20% persist and develop postpartum depression**

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

7

7

Postpartum Depression (PPD)

- **Peak 2-6 months after delivery**
- **11-25% of all births**
 - Compare to Gestational Diabetes rate of 9.2%
 - An estimated 900,000 individuals adjusted for miscarriages and stillborn pregnancies
- **Likely underreported given the self-reported nature of these CDC estimates**
- **20% of postpartum deaths caused by suicide**

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

8

8

PPD: What To Look For

- **Depressed mood**
- **Irritability**
- **Anxiety or agitation**
- **Anger**
- **Hypervigilance**, excessive worries about the baby
 - OR lack of interest in the newborn
- **Impaired concentration or feeling overwhelmed**
- **Feelings of guilt**
 - Unrealistic expectations of motherhood or the baby

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

9

9

Perinatal Anxiety (PPA)

- The most common PMAD, and often goes undiagnosed
- Symptoms include:
 - Excessive worries
 - Feelings of dread
 - Racing thoughts
 - Feeling overwhelmed
 - Obsessive thoughts
 - Racing heartbeat

SOURCE: Misri, S., Abizadeh, J., Sanders, S., & Swift, E. (2015).
NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

10

10

PPA: What to Look For

- Symptoms that often are mistaken as *normal* during pregnancy and postpartum:
 - Difficulty concentrating
 - Trouble sleeping
 - Changes in eating/sleeping patterns
 - Sense of memory loss
 - Nausea, dizziness, hot flashes
 - Irritability
 - Persistent fatigue

SOURCE: Misri, S., Abizadeh, J., Sanders, S., & Swift, E. (2015).
NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

11

11

Bipolar Disorder

- Onset peaks during reproductive years
- High risk of relapse with medication discontinuation
- Common symptoms include:
 - Reduced need for sleep
 - Racing thoughts
 - Impulsivity
 - Elated or irritable mood
 - Can have hallucinations and delusions

SOURCE: Viguera et al. American Journal of Psychiatry 2000; Yonkers, American Journal of Psychiatry, 2004
NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

12

12

Postpartum Psychosis is a Psychiatric Emergency

- 1/1000 women
- > 70% have a diagnosis of bipolar disorder
- Onset 24 hours-3 weeks postpartum
- Mood symptoms, psychotic symptoms, & disorientation
 - Rule out medical causes of delirium
- 4% risk of infanticide with postpartum psychosis

SOURCE: Wesseloo et al AJP 2016; Manic Depression Illness, Goodwin and Jamison, 2007

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

13

13

Obsessions vs. Psychosis

Obsessive-Compulsive Disorder (OCD) / anxiety / depression

- Preserved insight
- Thoughts are intrusive and cause distress
- No psychotic symptoms

Low risk

SOURCE: Margo Nathan, MD

Postpartum Psychosis

- Poor insight
- Psychotic symptoms
- Delusional beliefs or distorted reality present

High risk

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

14

14

Risk Factors

Reproductive

- Personal history of postpartum depression
- Family history of hormonal change associated mood symptoms
- History of mood changes related to menses

General

- Younger age
- High neuroticism
- Childhood trauma
- Sexual abuse
- Psychosocial stress
- Intimate partner violence
- Chronic medical condition
- Systemic racism

SOURCE: Melville et al OBGYN 2010 ; Meltzer-Brody et al, Arch Women MH2013; Crear-Perry J. 2018; Shepard AKK 2020

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

15

15

Perinatal Stress in the Time of COVID-19

Since COVID-19, increased stress about...

Food running out/availability	59%
Losing a job/loss of income	64%
Loss of childcare	56%
Tension/conflict in house	38%
Getting infected	93%

SOURCE: Moyer, C. A., Compton, S. D., Kaselitz, E., & Muzik, M. (2020). Pregnancy-related anxiety during COVID-19: a nationwide survey of 2740 pregnant women. *Archives of women's mental health*, 23(6), 757–765. <https://doi.org/10.1007/s00737-020-01073-5>

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

16

Perinatal Stress in the Time of COVID

- A 2021 survey by Harvard researchers found that pregnant and postpartum women reported increased:
 - Depression
 - Anxiety
 - Loneliness
 - Post-traumatic stress
- Symptoms were increased due to
 - Increased checking for news/updates
 - Worries about children & childcare
 - Worries about money

SOURCE: <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0249780>

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

17

Fetal Loss Statistics

Fetal loss is a spontaneous intrauterine death or loss of a fetus during pregnancy

- Miscarriage = fetal loss occurring before 20 weeks
 - For women who know they are pregnant, 10-15% of pregnancies end in miscarriage
- Stillbirth = fetal loss occurring after 20 weeks
 - On average in the US, ~3% of pregnancies result in stillbirths

US infant mortality rate: 5.9 deaths per 1,000 live births

- NC: 7.2 deaths per 1,000 live births
- Non-Hispanic Black women have double the fetal mortality rate of non-Hispanic White and Hispanic women

SOURCE: US CDC National Vital Statistics System, March of Dimes

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

18

Fetal Loss & Mental Health

- Fetal loss differs from other types of grief because there are no tangible memories of the loved one
- Grief symptoms that do not begin to decline by 6 months are more likely to be accompanied by psychiatric complications, anxiety disorders, major depression, substance misuse, and suicidality
- Number of miscarriages positively associates with psychopathology across age groups
- Supportive, culturally informed parent-centered bereavement care can help both families and care providers cope with loss

SOURCES: Brier, 2008; Toffol et al., 2013

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

19

PTSD: The Impact of Medical Trauma

Traumatic birth

- Up to 1/3 of moms report a traumatic childbirth experience
- Up to 9% of those women met DSM-V criteria for PTSD

Medical traumas may include

- Previous miscarriage, stillbirth, and/or child death
- Pregnancy-induced preeclampsia, HELLP syndrome, postpartum hemorrhage
- Child in NICU

SOURCE: Elizabeth Q. Cox, MD

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

20

PTSD: The Impact of Medical Trauma

Feelings	Impact
Self-blame	Re-experiencing cues
Feels invisible to medical providers	Avoidance of medical appointments, aftercare, or future pregnancies
Inability to relax	Detachment
Hypervigilance to health-related cues	Intrusive memories
Loss of dignity	Impaired mother-infant bonding
Powerlessness	

SOURCE: Elizabeth Q. Cox, MD

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

21

PTSD: The Impact of Intimate Partner Violence

Feelings

- Fears of becoming a perpetrator
- Inadequacy in motherhood
- Concerns about safety/danger outside of home
- Detachment
- Numbness/strong emotions
- Anger/rage

Impact

- Re-experiencing cues
- Avoidance of medical appointments
- Doesn't comply with treatment plans
- Inability to sleep
- Hypervigilance to infant and their safety

SOURCE: Elizabeth Q. Cox, MD

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

22

22

PTSD: The Impact of Systemic Racism

Feelings

- Feeling invisible to medical providers
- Feeling disrespected by their medical team
- Experiencing unfair treatment from medical providers
- Concerns that their pain is devalued

Impact

- Fear of asking for help
- Distrust of medical providers
- Black women are 3-4x more likely to die during or after delivery than white women
- Families of color disproportionately reported for abuse and neglect than white, non-Hispanic families

Taylor, J. K. (2020). Structural racism and maternal health among Black women. *Journal of Law, Medicine & Ethics*, 48(3), 506-517.

23

23

The Treatment Cascade

Women with PPD who...	Antenatal	Postpartum
are identified in a clinical setting	50%	31%
Receive treatment	14%	16%
Receive adequate treatment	9%	6%
Achieve remission	5%	3%

SOURCE: Cox EQ, Sowa NA, Meltzer-Erody SE, Gaynes BN. The Perinatal Depression Treatment Cascade: Baby Steps Toward Improving Outcomes. *J Clin Psychiatry*. 2016 Sep;77(9):1189-1200. doi: 10.4088/JCP.15r10174. PMID: 27780317.

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

24

24

Screening in Local Health Departments

- What tool(s) are you using at your local health department to screen for perinatal mental health symptoms?

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

25

25

Why Use Screening Tools?

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

26

26

Screening vs Assessment

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

27

27

Example Case

- A patient endorses experiencing the following symptoms “nearly every day” for the last 2 weeks on the PHQ-9:
 - Little interest or pleasure in doing things
 - Feeling down, depressed or hopeless
 - Trouble falling asleep, staying asleep, or sleeping too much
 - Feeling tired or having little energy
 - Poor appetite or overeating

Screening alone is not enough.

All screening should be implemented with adequate systems in place to ensure appropriate follow-up.

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

28

28

PHQ-9

- Component of the longer Patient Health Questionnaire
- Widely Used
- Brief
 - Completed in 5 mins or less
- Validated and documented in many populations and languages
- Asks about the last 2 weeks
 - Answer scale ranges from “Not at all” to “Nearly every day”

Sources: Arroll et al., 2010; Kroenke, Spitzer, & Williams, 2001

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

29

29

PHQ-2

- First 2 items of the PHQ-9
- Assesses for depressed mood and anhedonia
 1. Little interest or pleasure in doing things
 2. Feeling down, depressed, or hopeless

Scoring

Sources: Arroll et al., 2010; Kroenke, Spitzer, & Williams, 2001

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

30

30

Over the last 2 weeks, how often have you been bothered by any of the following problems?	Not at all (0)	Several days (1)	More than half the days (2)	Nearly every day (3)
Little interest or pleasure in doing things				
Feeling down, depressed, or hopeless				
Trouble falling asleep or staying asleep, or sleeping too much				
Feeling tired or having little energy				
Poor appetite or overeating				
Trouble concentrating on things, such as reading the newspaper or watching television				
Moving or speaking so slowly that other people could have noticed? Or the opposite – being so fidgety or restless that you have been moving around a lot more than usual				
Thoughts that you would be better off dead or hurting yourself in some way				

Patient Health Questionnaire (PHQ-9)
Developed by Drs. Robert L. Spitzer, Janet B.W. Williams, Kurt Kroenke and colleagues, with an educational grant from Pfizer Inc. No permission required to reproduce, translate, display or distribute.

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 31

31

Edinburgh Postnatal Depression Scale

- **Widely Used**
 - Developed for primary care settings
- **Brief**
 - Completed in 5 minutes or less
- **Available in more than 50 languages**
- **Asks about the last 7 days**
- **Can be used during pregnancy and during the postpartum period**

Sources: Cox, Holden, & Sagovsky, 1987; Monson & Rollins, 2008

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 32

32

Edinburgh Postnatal Depression Scale

Anxiety subscale (EPDS-3A)

- **Questions 3, 4, and 5**
 - Score of 5 or higher on these questions suggests the possible presence of an anxiety disorder
- **May not reliably distinguish between depression and anxiety**
- **Consider using the Generalized Anxiety Disorder 7-item (GAD-7)**

Sources: Cox, Holden, & Sagovsky, 1987; Rowe, Fisher, & Loh, 2008; Smith-Nielsen et al., 2021

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 33

33

Edinburgh Postnatal Depression Scale (EPDS)

Name: _____ Address: _____

Your Date of Birth: _____ Baby's Date of Birth: _____

Phone: _____

As you are pregnant or have recently had a baby, we would like to know how you are feeling. Please check the answer that comes closest to how you have felt **IN THE PAST 7 DAYS**, not just how you feel today.

Here is an example, already completed:

I have felt happy:

☐ Yes, all the time This would mean: "I have felt happy most of the time" during the past week.
☐ Yes, most of the time
☐ No, not very often Please complete the other questions in the same way.
☐ No, not at all

In the past 7 days:

1. I have been able to laugh and see the funny side of things	16. Things have been getting on top of me
<input type="radio"/> Yes, most of the time	<input type="radio"/> Yes, most of the time I haven't been able to laugh at all
<input type="radio"/> Yes, some of the time	<input type="radio"/> Yes, sometimes I haven't been laughing as well as usual
<input type="radio"/> Not much now	<input type="radio"/> No, not at all
<input type="radio"/> Not at all	
2. I have looked forward with enjoyment to things	17. I have been so unhappy that I have had difficulty sleeping
<input type="radio"/> As much as I used to	<input type="radio"/> Yes, most of the time
<input type="radio"/> Rather less than I used to	<input type="radio"/> Yes, sometimes
<input type="radio"/> Not much now	<input type="radio"/> Not very often
<input type="radio"/> Not at all	<input type="radio"/> No, not at all
3. I have enjoyed myself unexpectedly when things were quiet	18. I have felt sad or miserable
<input type="radio"/> Yes, most of the time	<input type="radio"/> Yes, most of the time
<input type="radio"/> Yes, some of the time	<input type="radio"/> Yes, quite often
<input type="radio"/> Not very often	<input type="radio"/> Not very often
<input type="radio"/> No, never	<input type="radio"/> No, not at all
4. I have been anxious or worried for no good reason	19. I have been so unhappy that I have been crying
<input type="radio"/> Yes, most of the time	<input type="radio"/> Yes, most of the time
<input type="radio"/> Yes, some of the time	<input type="radio"/> Yes, quite often
<input type="radio"/> Not very often	<input type="radio"/> Not very often
<input type="radio"/> No, never	<input type="radio"/> Only occasionally
5. I have felt scared or panicky for no good reason	20. The thought of harming myself has occurred to me
<input type="radio"/> Yes, quite a lot	<input type="radio"/> Yes, quite often
<input type="radio"/> Yes, sometimes	<input type="radio"/> Sometimes
<input type="radio"/> Not much	<input type="radio"/> Nearly ever
<input type="radio"/> No, not at all	<input type="radio"/> Never

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 34

34

When to Administer

- How often does your agency administer mental health screening tools to pregnant and postpartum patients?

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 35

35

When to Administer

Recommended time frames

- American College of Obstetricians and Gynecologists (ACOG)
 - every pregnant patient should be screened during pregnancy and postpartum
- Maternal Health and High-Risk Maternity Clinic Agreement Addenda
 - Full screen at initial prenatal visit and postpartum
 - 2nd and 3rd trimester if indicated by the PHQ-2 score

Other times to screen

- Clinical judgment and observations
- Re-administering to monitor symptoms

Source: American Academy of Pediatrics, 2017

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 36

36

How to Administer

Self Administered	Assistance with administering
<ul style="list-style-type: none"> • PHQ-9 and EPDS validated for self administered use • Can be introduced and interpreted by provider, nurse, or social worker 	<ul style="list-style-type: none"> • Reading/language barriers <ul style="list-style-type: none"> • Should be self administered in native language if possible • Can be read aloud to patients with literacy concerns • COVID-19 considerations

Sources: Pinto-Meza et al., 2005 ; Ford et al., 2020

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

37

How to Administer

Introduce the screening tool

Ensure privacy

Normalize the process and explain the purpose

Guide patient to think about the last week (EPDS) or last two weeks (PHQ-9)

↓

Review and score while with the patient

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

38

Scoring Considerations

Clinical judgment

- Patients may still be struggling with mental health concerns and score below the cutoff

Decide what constitutes a “positive” screen for each tool

- Policies should outline what is considered a positive score and the protocol for scoring
- Consider sensitivity and specificity
 - Lower cutoff score = High sensitivity and low specificity
 - Higher cutoff score = Low sensitivity and high specificity

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

39

Scoring the Tools

Scoring

- EPDS and PHQ-9 scores range from 0-3 for each item
- Total scores range from 0-30 for the EPDS and 0-27 for the PHQ-9

Cut off scores:

- EPDS : 11 or higher recommended for screening.
- 13 or higher used for research
- PHQ-9: 10 or higher

Sources: Arroll et al., 2010; Kroenke, Spitzer, & Williams, 2001; Cox, Holden, & Sagovsky, 1987; Lewis et al., 2020
NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

40

Last Questions

- Thoughts ≠ intent
- Clarify what patient meant when answering yes
 - Introduce the conversation using normalizing language
 - “Many people have these kinds of thoughts, and they can be really scary. Can you clarify what you meant when you said you have had thoughts of wanting to hurt yourself or someone else?”

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

41

Assessing Risk

- Ideation
 - Frequency and intensity of thoughts
- History
 - Past ideation, attempts, rehearsal behaviors, etc.
- Plan
 - “In what ways have you considered hurting yourself/others?”
 - Consider:
 - Means
 - Lethality & Access
 - Specificity of plan
 - Preparing or rehearsing
- Intent
 - “How likely is it that you will carry out this plan on a scale of 0-10?”

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021

42

Interventions & Referrals

Refer to emergency services if there are acute safety concerns

- **LME-MCOs**
 - Information telephone lines
 - Mobile Crisis teams
 - May refer to a crisis center or a behavioral health urgent care
- **Emergency Department & 911**
 - If patient is at imminent risk to themselves or others

Consider medication treatment

- **NC Maternal Mental Health MATTERS**

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 43

43

Referrals

Referring for long-term management

- **Support patient in making referral**
 - Give options of providers
 - Let patient know what to expect
- **Document referral and follow up with patient**

Where to refer

- **Internal Licensed Clinical Social Worker if applicable**
- **Health and Behavior Intervention Services (HBI)**
- **Private practice or clinician**
- **LME-MCO or local agency**

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 44

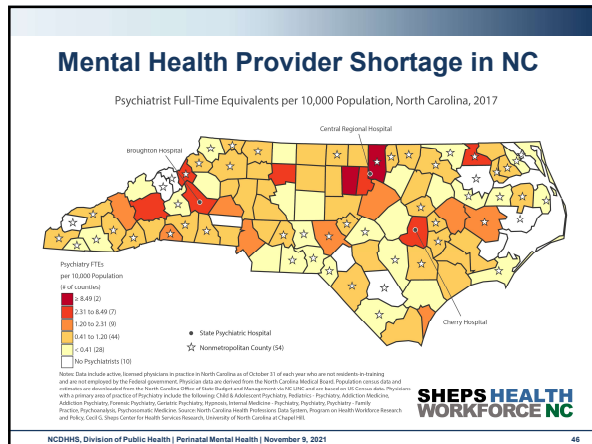

44

Resources

For Patients and Providers	Screening
<ul style="list-style-type: none"> • Natural Supports! • Postpartum Support International <ul style="list-style-type: none"> - https://www.postpartum.net/ - Listings by location for mental health providers who specialize in perinatal mental health • NC MATTERS • Crisis Resources by County <ul style="list-style-type: none"> - http://crisisolutionsnc.org/ • LME-MCO Directory by County <ul style="list-style-type: none"> - https://www.ncdhhs.gov/providers/lmemco-directory 	<ul style="list-style-type: none"> • PHQ-9 in various languages <ul style="list-style-type: none"> - https://www.phqscreeners.com/ • Generalized Anxiety Disorder 7 Item (GAD-7) • Mood Disorder Questionnaire (MDQ) <ul style="list-style-type: none"> - Bipolar Disorder

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 45

45

46

What's to be Done?

- Well-developed perinatal psychiatry program, with different settings and providers embedded throughout Primary care and OB, is not available in most settings
- Cannot rely on mental health providers being able to care for perinatal patients
- Patients want to receive care from providers they know and trust – difficulty with navigating system of mental health outside their medical home

47

Starting the Conversation

"Based on what you've told me, I'm concerned that you may be having a difficult time or have anxiety. Many people feel this way when they are pregnant or have just had a new baby. There are things that you can do to feel better. Let's talk about some ideas that might work for you."

"It seems that you are doing well. If something changes, please let us know. We are here for you."

"It's reasonable that you would find things to be challenging right now for you and your family. How can I help you get support for your worries?"

48

What Can YOU Do?

- Prioritize mental health screening for individuals who are struggling with breastfeeding
- Help new parents connect with family and loved ones to help
 - Reduce feelings of isolation
 - Prioritize protected blocks of sleep
 - Lower distress
- Share that it is common for people to feel distressed during a time of transition. Asking for and accepting help is a sign of strength.
- Have a procedure and referrals ready for anyone who shows severe distress or expresses a desire to hurt themselves or someone else.

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 49

49

Activity: Mobilize a Team

SLEEP:

- "What could your partner or someone else in the home do to help you sleep?"
- "What things can you do during the day to ensure a good night's sleep?"

RELATIONSHIPS:

- "Who might live far away, but could help you from a distance, maybe using the phone or video chat?"
- "What are three things you and your partner enjoy doing together?"

SUPPORT:

- "Who can you count on in an emergency?"
- "Who can help you with the kids so that you can attend appointments?"

SOURCE: Edith Gettes, MD

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 50

50

Activity: Stress Relief Ideas

- Take care of your body
 - Take deep breaths, stretch, or meditate
 - Try to eat healthy and well-balanced meals
 - Go for a walk or a run, outside if you can
 - Get plenty of sleep
 - Avoid alcohol, tobacco, and drugs
- Make time to relax
- Text or call someone you love
- Listen to your favorite song
- Watch a funny video or show

52

Telepsychiatry consultation programs are one way to address some of the gaps and barriers that remain. NC Maternal Mental Health MATTERS is one such program, based here in North Carolina.

- Case consultation with psychiatrist for health care providers
- Goal is to keep patients in their medical home
 - Helps meet the increased demand for mental health services
 - Cuts down on referrals
 - Helps combat the issue of the psychiatrist shortage in NC
 - Decreases physical barriers

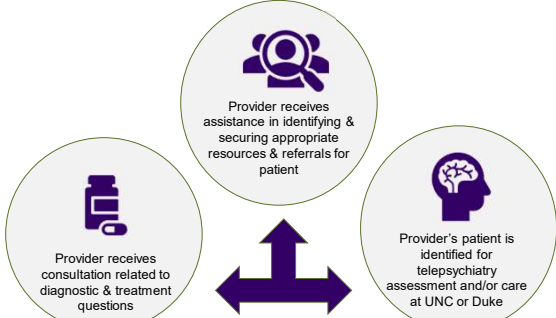

NC MATTERS

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 53

53

What Happens When I Call?

Provider receives assistance in identifying & securing appropriate resources & referrals for patient

Provider receives consultation related to diagnostic & treatment questions

Provider's patient is identified for telepsychiatry assessment and/or care at UNC or Duke

NCDHHS, Division of Public Health | Perinatal Mental Health | November 9, 2021 54

54

Patients from 50+ NC counties served by consult line

700+ patients served by NC MATTERS consult line since November 2019:

- 48% of calls on behalf of *pregnant* patients
- 43% of calls on behalf of *Medicaid* recipients
- 24% of calls from non-prescribers

Case Study

Jess (19 y.o., first baby, lives with partner but not married)

Prenatal History:

- Avoids questions about her childhood and her mother; doesn't seem to have much family support
- Reluctant to share information about her partner's role; he doesn't come to prenatal visits
- Doesn't follow up on joining prenatal support group

Postnatal:

- 4 weeks postpartum; EPDS of 16, 0
- Reports feeling very worried about being able to take care of her baby and to be a good mother
- Reports struggles with breastfeeding – it is painful and baby wants to nurse all the time
- Says partner works long hours and does not really help with childcare
